Production software for operationally critical work.

Gsoft Interactive Systems Ltd is a Lagos-based software development company building enterprise web platforms, mobile applications, and production AI systems for governments, financial institutions, healthcare operators, and high-growth businesses across Nigeria and Africa.

Founded in 2017, we have delivered more than 50 production software projects across fintech, government, healthcare, e-commerce, education, media, hospitality, and logistics. Our work for the **Rivers State House of Assembly** — an AI-powered civic engagement platform — was featured in three major Nigerian publications in December 2025: **Vanguard**, **THISDAY**, and **StartupInsights**. Each described the deployment as a model for government digital transformation in Nigeria.

We are an end-to-end engineering firm. Strategy, design, architecture, build, launch, and ongoing support all sit with the same team. Clients get one bill of materials, one team accountable, and a working system that holds up under real African conditions: bandwidth-constrained, regulator-watched, and high-stakes from day one.

In 2026, we expanded our service line to include **managed AI data services** — multilingual annotation, RLHF, technical and code labeling, and domain-expert data — supplying frontier-model labs and AI platforms with native African-language training data.

PRESS FEATURES

A senior engineering firm, **not** an agency.

We are a privately held Nigerian limited liability company. Our headquarters and engineering team sit in Lekki, Lagos. Our delivery footprint covers Nigeria, broader West Africa, and any geography served by a Nigerian engineering team operating in GMT+1 — with full overlap to both European and US East Coast working hours.

Our position in the market

Most Nigerian software vendors fall into one of two camps: agencies that build marketing websites at scale, or small freelancer collectives that piece together fintech demos. Gsoft sits in a third camp — a small, senior engineering firm that ships **production-grade** systems for clients whose software is operationally critical: handling real money, real records of state, and real users in real time.

We compete with international consultancies and senior-engineering boutiques rather than local generalist agencies. Our pricing reflects that posture, and so does our work.

Our values

- **Software is craft, not commodity.** We hold ourselves to the standard of systems that handle ten thousand concurrent users, four payment providers, and a regulator's audit — not the standard of a CMS template.
- **Africa-first means engineering for reality.** Our default performance budget assumes a 3G connection and a mid-range Android. Our payment integrations cover Paystack, Flutterwave, and the long tail of local processors. Our security posture assumes a real adversary, not a checkbox.
- **Production AI, not slideware.** If we put AI in a product, it is evaluated, observed, cost-disciplined, and grounded in your data. We do not ship hallucinations.
- **One team, one accountability.** The engineer who designs your data model is the engineer paged at three in the morning when the queue backs up. End-to-end ownership is non-negotiable.

Eight years of systems that **keep working.**

In 2017, our founder Mr. Gift Edegware established Gsoft Interactive Systems with a focused brief: build software that holds up under real African conditions.

The first projects were small — a marketing site here, a custom internal tool there. The reputation that grew around the work was different from the typical local agency narrative: clients said the systems worked, and they kept working.

Eight years later, Gsoft has built fintech wallets handling real customer money, government platforms covered in the national press, multi-tenant SaaS for African sellers, e-learning systems with paid content delivery, OTT streaming platforms, hospitality booking systems, healthcare workflows, and logistics marketplaces.

We have intentionally stayed small and senior. We do not run a junior body shop. The engineers who pitch the work are the engineers who write the code, and the engineers who maintain the system in production are the ones who designed it. This is unusual in the Nigerian software market, and it is the reason most of our clients stay on retainer after launch.

“The engineers who pitch the work are the engineers who write the code — and the same engineers maintain it in production.”

THE GSOFTE DELIVERY MODEL

— WHAT WE DO

Six service lines, one accountable team.

Most engagements span more than one service line. A fintech mobile app, for example, will involve software development, mobile engineering, AI features, and ongoing infrastructure operations.

Custom Software Development 01

Bespoke enterprise web platforms, multi-tenant SaaS, internal tools, and APIs on Laravel, Node.js, and modern stacks for organisations that have outgrown off-the-shelf software.

Web Development & Design 02

High-conversion marketing sites, dashboards, e-commerce stores, and PWAs engineered for Core Web Vitals, SEO, and the realities of Nigerian bandwidth.

Mobile App Development 03

Cross-platform Flutter and native iOS/Android with offline-first architecture, payment integrations, biometric auth, virtual cards, and multi-tier KYC.

AI & Machine Learning 04

Production AI features: RAG search, document automation, embedded domain assistants, voice and chat interfaces, and agents on Claude, OpenAI, and self-hosted models.

AI Data Services 05

Managed AI training data for frontier labs: multilingual annotation in African languages, RLHF, technical and code annotation by working engineers, domain-expert labeling.

Digital Marketing & SEO 06

Technical SEO, performance marketing, content strategy, and Google Ads — engineered into the codebase rather than bolted on after launch.

Service	Typical engagement	Starting price (NGN)
Custom Software Development	12–32 weeks, fixed-scope	₦15M+
Web Development & Design	4–12 weeks, fixed-scope	₦400k–₦4M
Mobile App Development	8–32 weeks, fixed-scope	₦5M+
AI & Machine Learning	Feature scoped, 3–12 weeks	₦3M+
AI Data Services	Pilot or ongoing pod	Custom
Digital Marketing & SEO	Retainer or audit	₦400k/mo+

All engagements include a paid one-week discovery phase that produces a fixed-price proposal. The discovery fee is deductible from the build.

Independently verified delivery quality.

Press-recognised production work

In December 2025, three major Nigerian publications independently covered our launch of the Rivers State House of Assembly digital platform, describing the deployment as a model for government digital transformation in Nigeria.

- **Vanguard** — *Gsoft transforms civic engagement with state-of-the-art AI-powered digital platform for Rivers State House of Assembly.*
- **THISDAY** — *Gsoft Launches Digital Platform to Boost Rivers Assembly Engagement.*
- **StartupInsights** — *The Full-Stack Tech Company That Just Delivered Rivers State Assembly's Digital Platform.*

Few Nigerian software firms can point to that level of independent verification of delivery quality.

Engineering, not coordination

Every project is staffed by working engineers from start to finish. We do not run a model where senior consultants sell the work and juniors deliver it. The engineer who designs your architecture writes the code. This is the single biggest reason our delivery quality is consistent.

Production AI capability

We have shipped AI features into production for paying clients — including the Claude-powered legislative search on the Rivers State HoA platform and the AI accounting assistant inside Every27. We know what frontier AI looks like in production: the evaluation discipline, observability, cost management, and graceful-degradation patterns most teams skip.

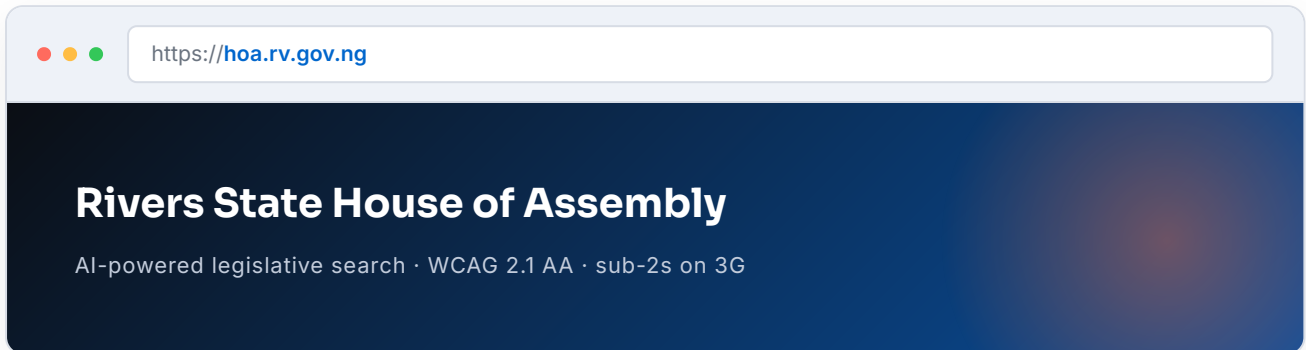

Africa-first engineering, internationally credible delivery

Our default test devices are mid-range Androids on flaky connections. Our payment integrations cover the providers Nigerian customers actually use. Our security posture treats data protection as a discipline, not a checkbox. At the same time, our code, documentation, and architectural patterns hold up against any international peer-review standard.

MSA-ready and enterprise-prepared

We are a registered Nigerian Ltd with the legal footing to enter standard enterprise agreements. We sign NDAs at first contact, handle data processing addenda, invoice in USD or NGN, and operate in working hours that overlap both EU and US East Coast time.

Eight builds, in production.

Rivers State House of Assembly FLAGSHIP

hoa.rv.gov.ng
LIVE AT

AI-powered legislative search · accessibility-first design · government-grade reliability

The Assembly needed a digital platform that did more than a static website. Citizens had no easy way to find their representatives, track active bills, or follow committee work. We were brought in to design and build a single, accessible platform that would set a new bar for Nigerian government digital presence.

What we shipped

Member directory with full profiles, constituencies, committee memberships, and attendance records. Legislative tracking for bills, motions, and resolutions with full document history.

AI-powered search — retrieval-augmented natural-language search that lets a citizen ask “what bills has my representative sponsored on education?” and get accurate, cited answers from the legislative corpus. Accessibility-first, WCAG 2.1 AA, sub-2-second loads on 3G.

Laravel 11

Every27 — Payroll Platform with AI

SaaS IP
PRODUCTISED

Multi-tenant payroll · salary advance · employee wallets · embedded AI accounting

A multi-tenant payroll SaaS for Nigerian businesses with built-in salary advance, employee wallets, and a Claude-powered accounting assistant that answers questions like "What was my total PAYE liability last quarter?" with real numbers from the company's payroll data.

Multi-tenant with strict row-level isolation.

Automated payroll with Nigerian-specific PAYE, pension, and statutory deductions.

Salary-advance approval workflow with employer

policy controls. Paystack-backed employee wallets.

CodeIgniter 4

PHP 8.1

MySQL 8

Paystack

Anthropic Claude API

Timeline: 14 weeks · **Team:** 4

PRODUCTION AI IN PRACTICE

The embedded Claude assistant is grounded strictly in each tenant's own payroll data — evaluated for accuracy, scoped to the company's records, and built to say "I don't know" rather than guess at a number that touches someone's salary.

Multi-tenant

Strict row-level isolation between every business on the platform.

PAYE-aware

Nigerian statutory deductions, pension, and tax handled automatically.

Wallet-backed

Paystack-powered employee wallets with salary-advance controls.

Ten sectors, in production.

Every row below is live or delivered work — not a capability we hope to offer one day.

Sector	Examples of work
Government & civic tech	Rivers State House of Assembly digital platform (press-covered)
Fintech & banking	CreditPoint wallet · multi-currency banking platform · payroll fintech
E-commerce & SaaS	Growzen multi-tenant seller platform
Education & e-learning	Learnrail full-stack platform
Media & broadcast	FDTV streaming and PWA
Hospitality	Golden Tulip Rosa Villa booking platform
Logistics & marketplace	Driver-first logistics marketplaces
HR & payroll	Every27 multi-tenant SaaS with AI assistant
Legal & estate planning	Encrypted digital will and document platform
Trading & gift cards	PHP API + Flutter mobile trading app

Cross-sector engagements are common — a fintech build, for example, draws on our government-grade security posture and our e-commerce payments experience at the same time.

The full stack Nigerian software runs on.

Our team is fluent across the stacks most Nigerian production software runs on — chosen per project for fit, not fashion.

Backend

Laravel 11/12 (PHP 8+) — default for new projects

CodeIgniter 4 — multi-tenant, shared-hosting constraints

Pure PHP 8+ — customer-deployable, zero build steps

Node.js (Next.js, NestJS)

Eleventy (11ty) — static, SEO-first sites

Mobile

Flutter 3.x — default for cross-platform

Native Swift / Kotlin where platform features demand it

Data

MySQL 8, PostgreSQL 15+, Redis

Integrations

Payments: Paystack, Flutterwave, Stripe

KYC: Smile ID, Verify Me, Premblee

SMS/OTP: Termii

Card issuance: Sudo Africa, sponsor-bank programmes

Comms: WhatsApp Cloud API, FCM, APNs

Delivery: Bunny CDN, Cloudflare

Frontend

Vue 3 with Inertia.js

React with Next.js

Tailwind CSS

Vanilla HTML/CSS/JS where appropriate

Filament — production admin panels

AI

Anthropic Claude — production default

OpenAI GPT-4o, Whisper, TTS

Open-source (Llama, Qwen, Mistral) — self-hosted for data sovereignty

RAG, document extraction, embedded assistants

Infrastructure

DirectAdmin shared hosting (cPanel-class)

VPS — Hetzner, DigitalOcean

Cloudflare — CDN, WAF, DDoS protection

GitHub Actions — CI/CD

Sentry — error tracking, structured logging

Transparent, predictable, milestone-driven.

1

Introduction · 30 min, free

A scoping call to understand what you are building, who it is for, the constraints, and whether there is a fit. We say no when there is not.

2

Discovery · 1 week, paid

A focused workshop produces a written scope, fixed-price proposal, architecture diagram, and screen-by-screen feature list. The fee is deductible from the build.

3

Design & architecture

Wireframes through high-fidelity UI in Figma, plus architecture diagrams covering data, services, integrations, and deployment. Sign-off before any code is written.

4

Build in milestones

Weekly demonstrations, fortnightly milestones, and payment tied to delivery. Clients see progress every week and can redirect within scope without delay.

5

Launch

Staged rollout through staging, UAT, and production. We handle DNS, SSL, CDN, and the post-launch monitoring nobody likes to talk about.

6

Maintain · optional

A monthly retainer for ongoing maintenance, feature work, security updates, and incident response. Most clients stay on, because the team that built the system knows it best.

Engagement models

Model	When it fits
Fixed-price project	Defined scope, clear acceptance criteria, 4–32 weeks
Time & materials	Discovery-heavy work, evolving requirements
Monthly retainer	Post-launch maintenance, feature backlog, ongoing improvement
Framework agreement	Multiple work streams over 12+ months for enterprise and government
Dedicated team	Embedded engineers for ongoing programme work

The person **behind the work.**

Mr. Gift Edegware

FOUNDER & CEO

Gift founded Gsoft Interactive Systems in 2017 with a focus on shipping production software that holds up under real African conditions. Since then he and the team have delivered platforms for government agencies, fintechs, healthcare operators, and high-growth businesses across Nigeria and Africa — including the AI-powered digital platform for the Rivers State House of Assembly covered by Vanguard, THISDAY, and StartupInsights in December 2025.

He works hands-on across architecture, AI strategy, and client engagement — leading the engineering team while staying in the codebase on the projects that matter most. He is the primary point of contact for partnership conversations and senior-level engagements.

AVERAGE RETAINER AFTER LAUNCH

99.9%

UPTIME ON MANAGED CLIENTS

The short version.

The reasons clients tell us they chose us over the alternatives.

-  **End-to-end ownership**
One team handles discovery, design, build, launch, and maintenance. No handoffs, no fingers pointed across organisational lines.
-  **Production-grade defaults**
Tests, observability, audit logs, backups, security headers, NDPR alignment — built in, not bolted on.
-  **Africa-first, internationally credible**
Built for Nigerian constraints, holds up against any international peer review.
-  **Pricing transparency**
Fixed-price proposals after discovery. Milestone billing. No scope-creep surprises.
-  **Engineers, not coordinators**
The person who designs your data model writes the code and answers the 3 a.m. page. Uncommon in the Nigerian market.
-  **Press-validated track record**
Three independent national publications have covered our work.
-  **MSA-ready and legal**
Registered Nigerian Ltd since 2017, set up for enterprise contract structures.
-  **Code ownership transfers on payment**
You own what we build for you. Always.
